#### Popular Science stem cell clinic

#### article itself raising some red flags

*Popular Science* recently did a piece on stem cell clinics that has raised some red flags. The concerns in this case are not necessarily about the clinics per se, but rather the actual article itself.

### Researchers test shingles virus treatments using embryonic stem cells

A team of scientists from Bar-llan University (BIU) in Israel recently discovered the human embryonic stem cells are useful for testing drug treatments against varicellazoster virus (VZV), also known as the chickenpox virus.

### Neat trick grows two parts of the brain and gets them to communicate

Over the past year or so, teams around the world have reported using stem cells to make increasingly complex portions of the brain. Earlier this month we wrote about a team at Stanford who has grown...

## Building a Bridge to Therapies: Stem Cell-Derived Neurons Restore Feeling to Injured Limbs

It's been a great week for spinal cord injury-related stem cell research - and it's only Tuesday. In case you missed it, Asterias Biotherapeutics announced yesterday that they had treated their first clinical trial participant...
