### Embryonic Stem Cells Restore Vision In Preliminary Human Test

Scientists are reporting the first strong evidence that human embryonic stem cells may be helping patients. The cells appear to have improved the vision in more than half of the 18 patients who had become legally blind because of two progressive, currently incurable eye diseases. [Read more here.](#)

### Breakthrough Replicates Human Brain Cells for Use in Alzheimer's Research

For the first time, and to the astonishment of many of their colleagues, researchers created what they call Alzheimer's in a Dish - a petri dish with human brain cells that develop the telltale structures of Alzheimer's disease. [Read article here.](#)

### Harvard Breakthrough Grows Insulin-Control Cells in Bulk

The latest clinical trial is the first step of epoch-making research that could evolve into regenerative medicine. After careful safety assessment, putting the latest result into practical use should be promoted. [Read article here.](#)
